Cardiology Consultation

What is a Cardiology Consultation?

Your physician has referred you for a consultation with a cardiologist from Fort Wayne Cardiology. Cardiologists are experts in the diagnosis, treatment and prevention of cardiovascular diseases, which generally include diseases of the heart and blood vessels throughout the body. For many heart or blood vessel problems your primary care physician may manage your care, such as in the case of high blood pressure or high cholesterol. Oftentimes these conditions can be treated effectively with medication and diet only. Sometimes the problems can be more complicated and may require a cardiology consultation.

Following the evaluation by the cardiologist, you will receive an explanation about your diagnosis or condition and any recommendations, which may include other tests, medications or treatments. The results of your evaluation and any tests or treatments will be communicated to your primary care physician.
